### PREVENTIVE TREATMENT

FISSURE SEALANTS – per tooth	£10.00	£15.00
DURAPHAT APPLICATION	£10.00	£15.00

Fissure sealants are plastic coatings that are painted on to the grooves of the back teeth. The sealant forms a protective layer that keeps food and bacteria from getting stuck in the tiny grooves in the teeth and causing decay. The process is usually quick and easy taking only a few minutes per tooth. The tooth is thoroughly cleaned, prepared with a special solution, and dried. The sealant is then applied and allowed to set hard – by shining a blue light onto it. Sealant usually last for many years, but needs to be checked regularly to make sure that the seal is intact. It can wear over time, and sometimes needs to be added to or replaced to be sure that no decay can start underneath it.
